

# ROYAL LONDON EMERGING MARKETS EQUITY TRACKER FUND

Royal London Asset Management (RLAM) has been offering passive funds since 2003 and currently manages £23.5 billion of equity tracker fund assets (as at 30 September 2018). The RL Emerging Markets Equity Tracker Fund provides a low cost solution for investors who want emerging market (EM) exposure whilst aiming to reduce inherent stock level risk by investing in EM companies with high environmental, social and governance (ESG) ratings.

## Key points

- **Passive, cost effective and straightforward approach:** the fund aims to track the capital performance of the MSCI Emerging Markets ESG Leaders Index.
- **Environmental, social and governance exposure:** the fund will provide investors with the opportunity to invest in EM companies with high scores in corporate governance, environmental and social factors relative to their sector peers. We believe that companies with higher ESG scores have exhibited better and more stable financial performance when compared to low rated ESG companies.
- **Portfolio optimisation:** the fund uses an optimised portfolio to track the capital return of the index without the fund necessarily having to hold all of the constituents in their exact benchmark weights. This gives the investment manager flexibility not to trade every index or cash flow event in cases where trading would create disproportionate costs.
- **Experienced team:** the fund benefits from a well-established team and an extremely experienced fund manager with over 20 years of industry experience.

## The case for emerging markets

- Significant amounts of growth and high returning stocks are often found in countries in an emerging growth phase. These countries tend to be resource rich with large labour forces.
- Approximately 85%\* of the global population live in emerging markets. The younger demographic of these markets combined with their increasing wealth, can lead to greater consumption and economic growth.
- The growth potential offered by the emerging markets may present investors with an opportunity to diversify and benefit from this.
- Investing in emerging markets may provide greater rewards but carries greater risk due to possibility of high volatility, low liquidity, high currency fluctuation, the adverse effect of social, political and economic instability, weak supervisory structures and weak accounting standards.

## The benefits of ESG investing

- The quality of company ESG data has improved and strategies that incorporate ESG can be shown to enhance returns (please refer to graph overleaf).
- We believe that companies with strong corporate governance are more likely to exhibit growth with lower inherent risk than those companies with poor corporate governance. This is particularly the case for emerging markets companies where governance risks are higher.
- We believe that companies that monitor and manage their ESG risks are more likely to capitalise on emerging global trends such as population growth and sustainable development while being resilient in the face of issues like resource depletion, global climate change and labour market disruption.

Past performance is not a reliable indicator of future results. The value of investments and the income from them is not guaranteed and may go down as well as up and investors may not get back the amount originally invested.

## Fund facts

<b>Launch date</b>	12.06.2017 (R Share Class) <sup>†</sup> 05.03.2018 (Z Acc Share Class)
<b>Domicile</b>	GBR
<b>IA sector</b>	IA Global Emerging Markets
